Origin: 100% manufactured in Switzerland

You may think that the purpose of this limited-edition RCD 82 Mechanically Performing Credit Card Holder, is to house and dispense your credit cards, but its much more than that.

Issued in a limited-edition series of 80, and further customised to 10 each by colour and material, this card holder is code for “I’m untouchable”. Place it on the table of your favourite restaurant, flash it at your golf or tennis club, play with it on your friend’s yacht or on your private jet, and those around you will immediately understand that you are a gentleman of discerning taste, style and financial means.

As you demonstrate with one-handed ease, the cascading of up to six of your most important credit cards and collapse them back inside the case with the same one-handed action, you deliver the killer line to the already jealous onlooker-- “there are only 10 of these in the world”... Then hand it to him and tell him to open it with one hand—he can’t! Only you know the secret of its superior functionality.

The RCD82 is not just a pretty face, however, since the titanium and aluminium surfaces protect the credit cards inside against bending or damage and offers extra protection in shielding radio waves-- an important security consideration to safeguard private and credit card information from wireless card readers.

RCD81 MARK I TRIGGER CARD DISPENSER

This light and ergonomic mechanical dispenser for credit cards houses a trigger dispensing mechanism which cascades up to four credit cards for easy handling and collapses them back inside the case with the same trigger action. The extruded aluminium case is ultra light and its supple density makes it an ideal material for engraving. Its smooth curves are enhanced through a contradiction of satin and polished surfaces.

The trigger mechanism is reinforced with inox for longevity and the aluminium surfaces protect the credit cards inside against bending or damage and offers extra protection in shielding radio waves-- an important security consideration to safeguard private and credit card information from wireless card readers.
